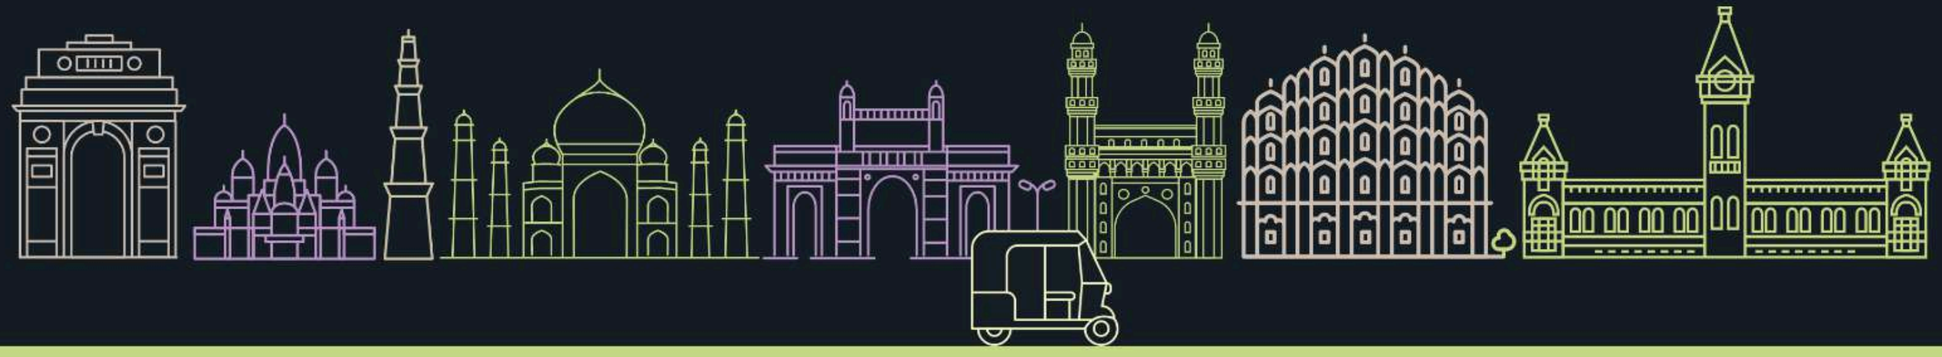
AI for Bharat Hackathon

Powered by aws



Team Name : Team Shelf-Bidder

Team Leader Name : SHUBHAM KUMAR

Problem Statement : Kirana store shelves are given on fixed rent or free. Valuable shelf space is under-monetized daily.

Shelf-Bidder: The Autonomous Retail Ad-Network

Turning Dead Inventory into Digital Real Estate

- **The Concept:** Just like Google Ads auctions website space, Shelf-Bidder auctions physical shelf space in Kirana stores to brands (Coke, Pepsi) in real-time.
- **The Innovation:** We use Computer Vision to detect empty shelves and Autonomous Agents to negotiate deals between brands and shopkeepers instantly.
- **The Impact:** Turns a passive "Inventory Problem" into an active "Revenue Stream" for millions of small retailers.

Why Shelf-Bidder is Different

8:00 AM Morning Trigger

The system sends a daily notification to initiate the shelf-optimisation workflow.

30-Second AI Vision Analysis

AI identifies empty spaces and calculates dimensions from a single shelf photo.

15-Minute Automated Auction

Brand agents automatically bid for available space without requiring shopkeeper negotiation.

Voice-Guided Task Assignment

Shopkeepers receive a phone call with simple instructions for winning product placements.

Instant Proof Verification

AI validates the correct product placement within 30 seconds of photo submission.

Immediate Wallet Crediting

Earnings are updated instantly in a simplified wallet upon successful task verification.

From photo to payment in minutes — fully autonomous.

- AI vision for shelf analysis
- Agentic AI for bidding
- Automated auction engine
- Voice-guided task assignment
- Proof verification & wallet credit

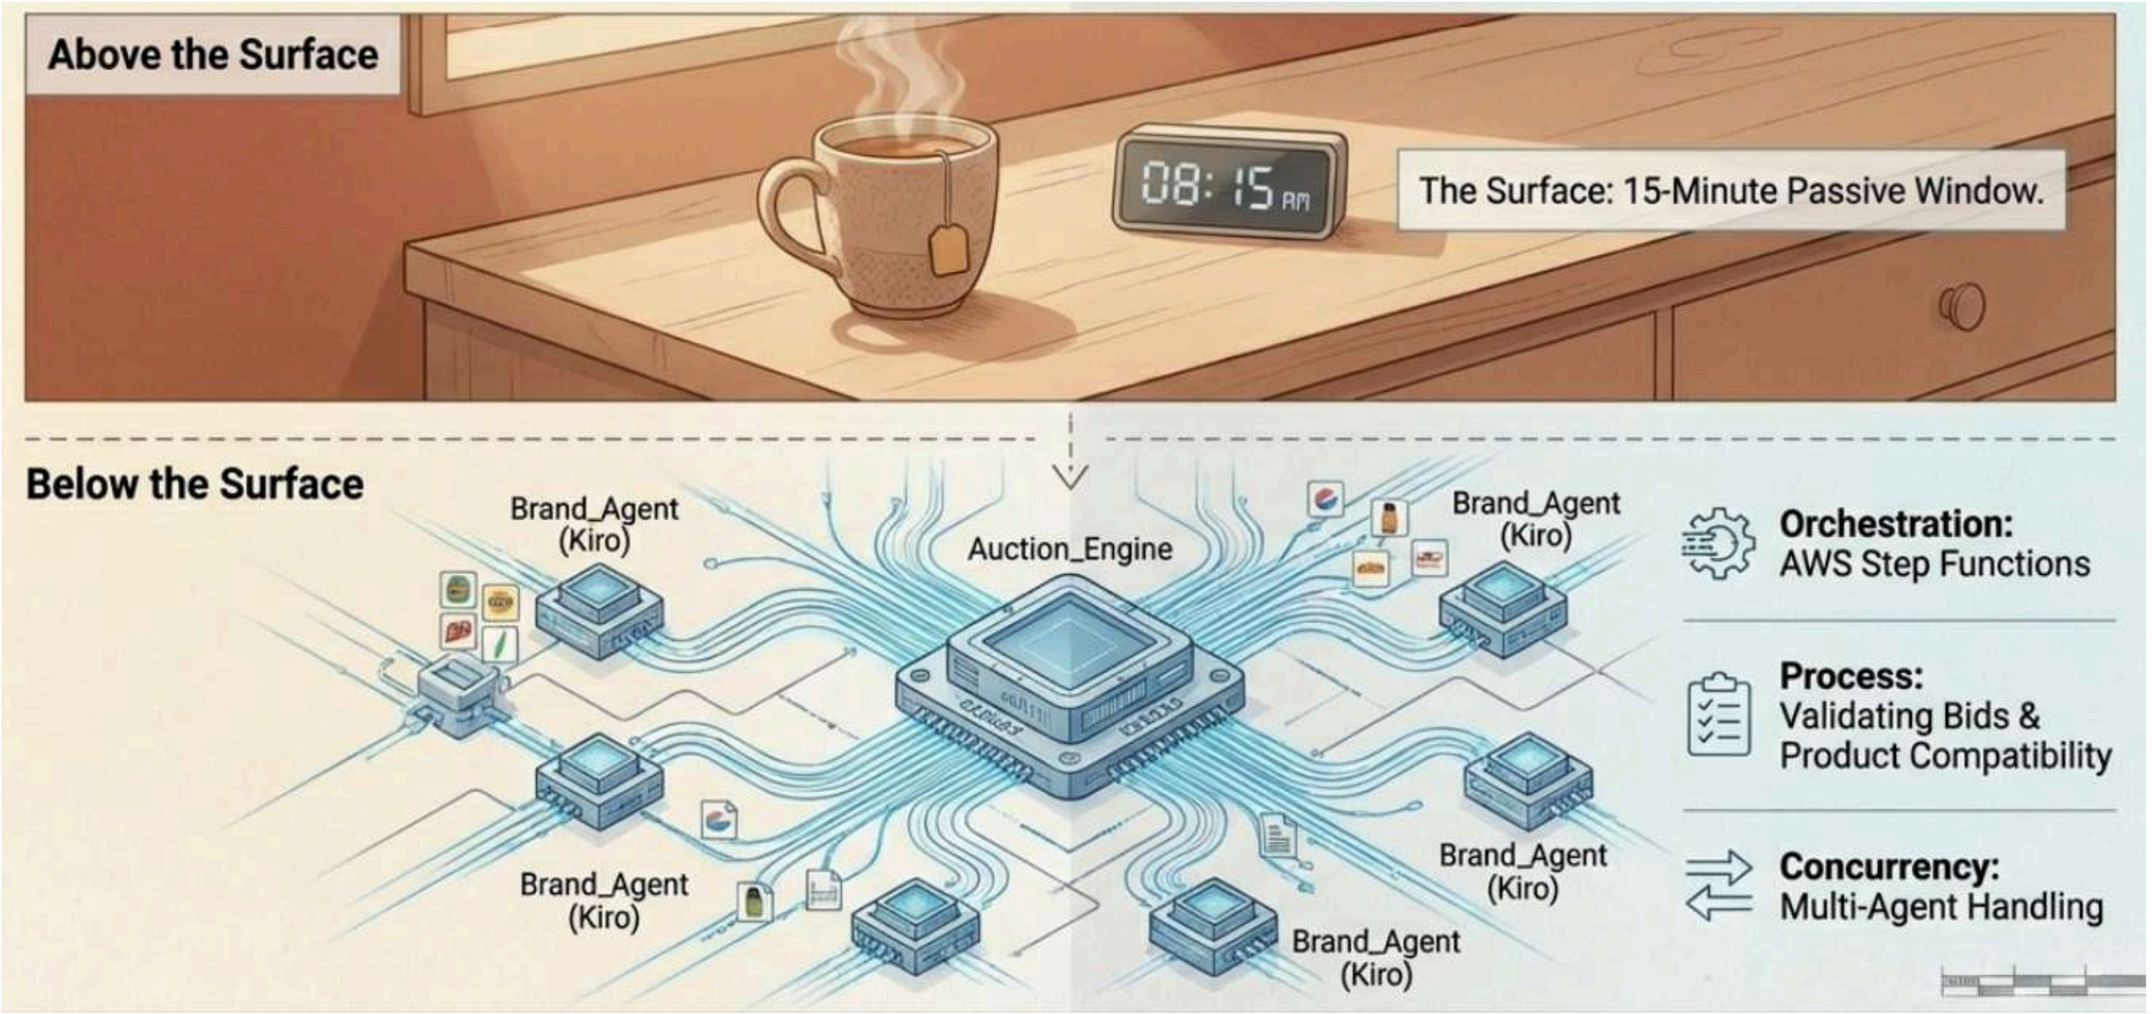
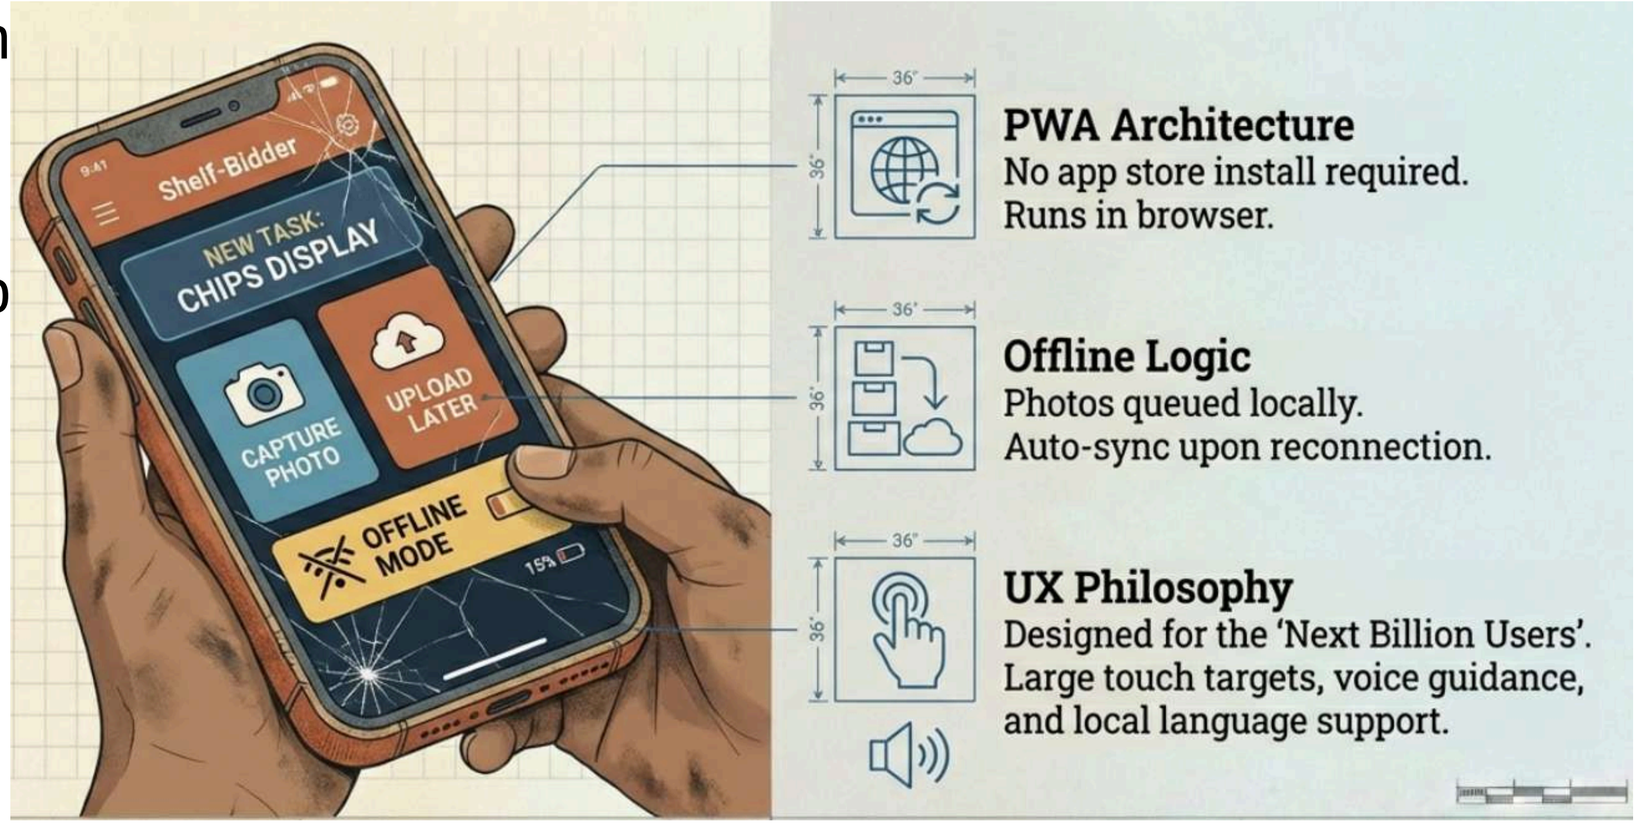
Agentic AI Architecture



- AWS Bedrock (Vision AI)
- Kiro.dev (Agentic AI)
- AWS Lambda & Step Functions
- AWS Connect & Polly
- DynamoDB
- Next.js PWA



Prototype built on AWS free tier.
Production scales pay-as-you-go.

Turning unused kirana shelves into daily income using autonomous AI.
